Software Developer with Automation & Cloud Focus (Backend/DevOps)

Full-Stack Developer with almost 2 years of hands-on experience in the development and deployment of critical systems, specialized in Backend (Java/Spring Boot, Python/Django), and practical expertise in implementing CI/CD environments (GitLab, Jenkins, Docker, SonarQube) and Cloud infrastructure administration (AWS, Linux). A key achievement was establishing the company's entire development and CI/CD toolchain, elevating team collaboration and software quality (SonarQube). Seeking to apply my hybrid expertise to scale systems and automate workflows in a DevOps/SRE role.

Experience

Since May 2024

A3E Ingenieros Especialistas en Energía Eléctrica

- Led the implementation and administration of the DevOps/CI/CD toolchain (GitLab CE, Jenkins, SonarQube, OpenProject) within Docker and Portainer containers, establishing the company's entire development and deployment environment.

- Designed and developed an Energy Management System (ISO 50001) for certification, integrating Backend features like baseline calculation with statistical models (R^2) and predictive consumption analysis (Prophet, ARIMA).

- Full-Stack development of a Purchasing Management System (Spring Boot, Next.js/ReactJS, MySQL), responsible for containerization (Docker) and deployment orchestration (Docker Compose over Proxmox VM) for internal use.
